

# The Yet Brew

Here we go loopy loo  
We are going to make a witch's brew  
One half water to start  
Making potions is an art  
One half oil to get things done  
A pinch of sprinkles because it's fun  
A bolt for the things you know  
And a nut for the sillies you show

3 kernels go  
Plop, Plop, Plop  
You will never stop

Add colors true  
One drop two let's make it a few

Lid on tight  
You're so bright  
Shake, shake, shake  
Mistakes are great

Turn, turn, turn  
this is how we learn

**I Don't know  
Yet**

# A magick potion that is made with the power of yet.

Making mistakes and being brave enough to try is difficult for everyone. But whenever your frustrated or uncomfortable with the learning process give this potion a shake and watch it separate reminding us that no matter the mistake things will always fall into place, confusion will subside to understanding.

## You will need:

Water  
Baby Oil  
Food Coloring  
Glitter Stars  
A Nut & A Bolt  
Kernels of Popcorn

## Follow this instruction of the rhyme.

1. Start by adding the water asking the kids to fill it up by half and the other half oil.

Observe the water will float upon the water. We all have two aspects the one we show the world and the inner self that lives inside us.

2. Then add the glitter

We all have a little magick inside us and no one can take that away.

You are you and you are amazing.

Learning adds dimension to who we are, the more things you learn the more interesting of a person you are, you can explore hobbies and interested your whole life.

Observe the glitter pause as it floats between the outside world (oil) and more slowly to inner world. (water) just like learning.

3. Next add the bolt & the nut.

This bolt is what holds it all together representing internal knowledge and confidence. You know what you know. If you know something you should have to courage to share what you know.

The nut represents being silly which can take a little bravery. Sometimes you must do something that makes you feel silly and strange, but this is part of the learning process. The nut and bolt work better together.

4. Add kernels - Ask the kids how many good ideas they have

Ideas just pop in your head and that is amazing! It's a surprise as it pops. When your learning thinks can click in to place with a pop and a surprise and its great.

5. Next add food coloring.

The color can bring the energy you relate with best. Your favorite color is a part of everything. Learning facts is wonderful but there is no better learning then the learning about you. Always remember that a bit of knowledge can change everything.

6. Replace the lid.

Seal with super glue in the cap on allow time to dry. Your knowledge is sealed in you and you have to show with your words and actions - like shaking it up.

## Shake to celebrate each mistake.

## Watch it sperate because this is how you grow.
